## EDUCATION

**Pimpri Chinchwad College of Engineering**  
*Bachelor of Technology in Computer Science*

Pune, MH  
Aug 2023 – May 2027

## SUMMARY

3rd-year CS student who likes building things that actually work and look good. I pick up new tech fast, care about clean code and good UX, and I'm always working on something. Currently grinding DSA and shipping MERN stack projects. Looking for a software engineering internship where I can contribute, learn, and grow.

## PROJECTS

- Stride – Team Project Management Platform** | *React, Node.js, Express.js, MongoDB, Tailwind CSS* | ↗ 2026
- Built a team project management platform powered by scalable RESTful APIs, where users can create projects, invite members, assign roles, and collaborate – designed as an alternative to tools like Trello or Asana
  - Implemented project-level role-based access control with three roles – Owner, Admin, and Member – so teams can control who can edit, assign, or manage tasks
  - Built a Kanban board with drag-and-drop task management across columns, letting teams move tasks through stages visually without leaving the page
  - Added a dashboard with analytics showing task distribution, completion rates, and 14-day activity trends so project leads can track team progress at a glance
- Job Tracker** | *React, Node.js, Express.js, REST APIs, MongoDB, JWT, Recharts* | ↗ 2026
- Built a personal job application tracker to help students manage and monitor their internship search, with a Node.js/Express backend handling application CRUD, pipeline status updates, and reminder logic
  - Implemented user authentication with JWT and bcrypt so each user sees only their own data; protected all REST API endpoints with middleware-based token verification
  - Added a dashboard with Recharts charts showing application volume over time and status breakdown, giving users a clear picture of where they stand in their job search
  - Deployed frontend on Vercel and backend on Render with MongoDB Atlas; supports CSV export of all applications for offline reference
- Banking System Simulator** | *C++* | ↗ 2026
- Built a console-based banking system in C++ applying core OOP concepts — classes, inheritance, polymorphism, and abstraction — in depth
  - Implemented abstract base class `Account` with pure virtual functions, inherited by `SavingsAccount` and `CurrentAccount` with custom withdrawal rules
  - Applied runtime polymorphism using base class pointers in an STL vector to manage multiple account types through a unified interface
  - Used encapsulation to protect balance data and dynamic memory allocation with `new/delete` for heap-managed objects

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, C++, SQL, HTML, CSS  
**Frameworks and Libraries:** React.js, Node.js, Express.js, Tailwind CSS  
**Databases:** MongoDB, MySQL  
**Developer Tools:** Git, Postman, Figma, VS Code, Linux  
**Relevant Coursework:** Data Structures and Algorithms, OOP, DBMS, Computer Networks, Operating Systems

## ACHIEVEMENTS AND LEADERSHIP

- Design Head – ACM Student Chapter** Aug 2025 – Mar 2026  
*Pimpri Chinchwad College of Engineering* Pune, MH
- Led visual design for technical events at PCCOE; created posters, banners, and social media creatives using Figma and Canva for an audience of 200+ students
  - Coordinated with web and content teams to maintain consistent cross-platform branding across all chapter activities, ensuring cohesive design language
  - Mentored junior design volunteers and established reusable design templates to speed up turnaround for recurring events

**BlueBit Hackathon (National Level):** Selected as a Grand Finalist among top teams in a nationwide software development competition – built and pitched a full-stack product under a 24-hour deadline  
**MasterChef UI (College Event):** Secured 2nd runner-up position for UI/UX design in Figma – recognized for layout clarity, color consistency, and interactive prototype quality
